

## Free 10-Point Network Assessment

- ✓ **Event Log Review.** We'll search for warnings and unresolved errors which may represent imminent problems.
- ✓ **Anti-Malware Protection.** We will check to ensure the software, definitions and revisions are up-to-date and working as expected.
- ✓ **Backup.** Our technicians will check if your business critical data is being backed up, if off-site backups are available, and if your systems support restoring data from multiple points in time.
- ✓ **Storage.** We'll check that information is stored on redundant storage arrays, that no soft errors have occurred and adequate space remains.
- ✓ **Email & Anti-Spam.** We will check to ensure you have adequate protection against spam and email virus to protect against infections.
- ✓ **Power.** We will check to ensure your critical servers are protected by UPS devices and they have been properly configured with UPS management software.
- ✓ **Software Updates.** We'll check your servers and PCs for the latest security patches.
- ✓ **Wireless Networking.** Our techs will check your wireless access points for adequate security and encryption technology to avoid security risks.
- ✓ **Network & Remote Access.** We'll scan your Internet router / firewall for open ports which may pose a threat to your network's security.
- ✓ **Disaster Planning & Recovery.** In the event of a serious disaster such as a fire, how long can you afford to be down? Our staff can recommend the use of imaging and virtualization technologies which could allow you to recover quickly from major disasters.
